Operation	9-17	Troubleshooting	26-27
Maintenance	18-20		

SAFETY RULES

IMPORTANT: This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

I. GENERAL OPERATION

- Read, understand, and follow all instructions on the machine and in the manual(s) before starting. Be thoroughly familiar with the controls and the proper use of the machine before starting.
- Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
- Only allow responsible individuals, who are familiar with the instructions, to operate the machine.
- Clear the area of objects such as rocks, toys, wire, bones, sticks, etc., which could be picked up and thrown by the blade.
- Be sure the area is clear of other people before mowing. Stop machine if anyone enters the area.
- Do not operate the mower when barefoot or wearing open sandals. Always wear substantial foot wear.
- Do not pull mower backwards unless absolutely necessary. Always look down and behind before and while moving backwards.
- Do not operate the mower without proper guards, plates, grass catcher or other safety protective devices in place.
- See manufacturer's instructions for proper operation and installation of accessories. Only use accessories approved by the manufacturer.
- Stop the blade(s) when crossing gravel drives, walks, or roads.
- Stop the engine (motor) whenever you leave the equipment, before cleaning the mower or unclogging the chute.
- Shut the engine (motor) off and wait until the blade comes to complete stop before removing grass catcher.

- Mow only in daylight or good artificial light.
- Do not operate the machine while under the influence of alcohol or drugs.
- Never operate machine in wet grass. Always be sure of your footing: keep a firm hold on the handle and walk; never run.
- Disengage the self-propelled mechanism or drive clutch on mowers so equipped before starting the engine (motor).
- If the equipment should start to vibrate abnormally, stop the engine (motor) and check immediately for the cause. Vibration is generally a warning of trouble.
- Always wear safety goggles or safety glasses with side shields when operating mower.

II. SLOPE OPERATION

Slopes are a major factor related to slip and fall accidents which can result in severe injury. All slopes require extra caution. If you feel uneasy on a slope, do not mow it.

- Mow across the face of slopes: never up and down. Exercise extreme caution when changing direction on slopes.
- Remove obstacles such as rocks, tree limbs, etc.
- Watch for holes, ruts, or bumps. Tall grass can hide obstacles.

DO NOT:

- Do not trim near drop-offs, ditches or embankments. The operator could lose footing or balance.
- Do not trim excessively steep slopes.
- Do not mow on wet grass. Reduced footing could cause slipping.

III. CHILDREN

Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. *Never* assume that children will remain where you last saw them.

- Keep children out of the trimming area and under the watchful care of another responsible adult.
- Be alert and turn machine off if children enter the area.
- Before and while walking backwards, look behind and *down* for small children.
- Never allow children to operate the machine.
- Use extra care when approaching blind corners, shrubs, trees, or other objects that may obscure vision.

IV. SERVICE

- Use extra care in handling gasoline and other fuels. They are flammable and vapors are explosive.
 - Use only an approved container.
 - Never remove gas cap or add fuel with the engine running. Allow engine to cool before refueling. Do not smoke.
 - Never refuel the machine indoors.
 - Never store the machine or fuel container inside where there is an open flame, such as a water heater.
- Never run a machine inside a closed area.
- Never make adjustments or repairs with the engine (motor) running. Disconnect the spark plug wire, and keep the wire away from the plug to prevent accidental starting.
- Keep nuts and bolts, especially blade attachment bolts, tight and keep equipment in good condition.
- Never tamper with safety devices. Check their proper operation regularly.
- Keep machine free of grass, leaves, or other debris build-up. Clean oil or fuel spillage. Allow machine to cool before storing.
- Stop and inspect the equipment if you strike an object. Repair, if necessary, before restarting.
- Never attempt to make wheel height adjustments while the engine (motor) is running.

- Grass catcher components are subject to wear, damage, and deterioration, which could expose moving parts or allow objects to be thrown. Frequently check components and replace with manufacturer's recommended parts, when necessary.
- Mower blades are sharp and can cut. Wrap the blade(s) or wear gloves, and use extra caution when servicing them.
- Do not change the engine governor setting or overspeed the engine.

⚠ Look for this symbol to point out important safety precautions. It means **CAUTION!!! BECOME ALERT!!! YOUR SAFETY IS INVOLVED.**

⚠ CAUTION: Always disconnect spark plug wire and place wire where it cannot contact spark plug in order to prevent accidental starting when setting up, transporting, adjusting or making repairs.

⚠ WARNING: Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

⚠ WARNING: Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.
Wash hands after handling.

⚠ CAUTION: Muffler and other engine parts become extremely hot during operation and remain hot after engine has stopped. To avoid severe burns on contact, stay away from these areas.

CONGRATULATIONS on your purchase of a new Lawn Mower. It has been designed, engineered and manufactured to give you the best possible dependability and performance.

Should you experience any problems you cannot easily remedy, please contact your nearest authorized service center. They have competent, well trained technicians and the proper tools to service or repair this unit.

- Read the SAFETY RULES and this Operator's Manual in its entirety before you attempt to assemble or operate your new lawn mower to insure proper operation and to prevent injury to yourself and others. Save this manual for future reference.
- Your new lawn mower has been assembled at the factory with the exception of those parts left unassembled for shipping purposes. To ensure safe and proper operation of your lawn mower, all parts and hardware you assemble must be tightened securely. Use the correct tools as necessary to ensure proper tightness.
- All parts such as nuts, washers, bolts, etc., necessary to complete the assembly have been placed in the parts bag.

TO REMOVE MOWER FROM CARTON

- Remove all loose parts from carton.
- Remove lawn mower housing with care. Avoid touching blade under housing. Always wear gloves or other protection when working under or lifting mower.

THINGS TO KNOW BEFORE YOU ASSEMBLE OR OPERATE YOUR MOWER

Do I have a side or rear discharge lawn mower?

Look for the grass discharge opening on your mower. If the opening is on the right side of the mower housing, it is a side discharge mower. If the opening is at the back of the mower housing, it is a rear discharge mower. Only rear discharge lawn mowers have a grass catcher included with the mower. Approved grass catchers for side discharge mowers may be purchased from your nearest authorized dealer.

Do I have a mulching lawn mower?

Look for the grass discharge opening on your mower. Raise the discharge guard (rear door on rear discharge mowers). If the opening is closed off by a plate, then your lawn mower is mulcher ready. To convert to a discharging mower, see the Operation section of this manual.

What is the right and left side of the lawn mower?

When right hand (RH) or left hand (LH) is mentioned in this manual, it means when you are in the operating position (standing behind the handle).

What kind of engine is on my lawn mower?

When learning how to operate your new lawn mower, you will need to know what kind of engine powers the mower. A decal on the engine will indicate the manufacturer and type or brand name of the engine.

BRIGGS & STRATTON ENGINES

CLASSIC

QUANTUM

TECUMSEH ENGINES

TECUMSEH

HONDA ENGINES

HONDA

ASSEMBLY

⚠CAUTION: Do not operate this mower without the discharge guard or an entire approved grass catcher in place. These guards are for your protection and are required by the American National Standards Institute and Consumer Products Safety Commission.

⚠CAUTION: Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.

HOW TO SET UP YOUR LAWN MOWER

UNFOLD HANDLE

IMPORTANT: Unfold handle carefully so as not to pinch or damage control cables.

2 POSITION / "ADJUSTABLE" HANDLES

- Raise handles until lower handle section locks into place in operating position.

3 POSITION "EURO" / "EZ" HANDLES

- Raise lower handle section to operating position and align hole in handle with one of three height positioning holes.
- Insert handle bolt through handle and bracket and secure with knob.
- Repeat for opposite side of handle.

3 POSITION "EURO"

3 POSITION "EZ"

3 POSITION "QUICK" HANDLES

- Raise lower handle section to operating position and squeeze the bottom ends of lower handle towards each other until the pin in handle can be inserted into one of the three height adjustment holes.

ALL HANDLES

- Raise upper handle section into place on lower handle, remove protective padding and tighten both handle knobs.
- Remove handle padding holding operator presence control bar to upper handle.
- Your lawn mower handle can be adjusted for your mowing comfort. Refer to "ADJUST HANDLE" in the Service and

NOTE: For shipping purposes, the rear wheels on your lawn mower may not be adjusted to the same position as the front wheels. Before operating mower adjust all wheels to the same cutting height.

FOR HIGH WHEEL MOWERS ONLY - INSTALL REAR WHEELS

Some high wheel models require washers which will be provided in a parts bag. If provided, install washers on the axle first as shown.

- Install one (1) rear wheel on the axle of rear wheel adjuster.
- Install 3/8-16 locknut and tighten securely.
- Repeat procedure for other rear wheel.

FOR REAR DISCHARGE MOWERS ONLY - ASSEMBLE GRASS CATCHER

IMPORTANT: If your model lawn mower is mulcher ready, the mulcher plate or plug must be removed before using mower as a bagger. To convert mower to bagging or discharging, see the Operation section in this manual.

Look at the different grass catcher illustrations that follow. Determine which type of grass catcher you have and follow the appropriate instructions.

“FABRIC TOP” GRASS CATCHERS TO ASSEMBLE AND ATTACH GRASS CATCHER

- Put grass catcher frame into grass bag with rigid part of bag on the bottom.
- Slip vinyl bindings over frame.

NOTE: If vinyl bindings are too stiff, hold them in warm water for a few minutes. If bag gets wet, let it dry before using.

- Lift the rear door on the mower housing.
- For HINGE BRACKET mounted catcher, place the grass catcher frame onto the formed tabs on the rear door hinge bracket.

- For HANDLE BRACKET mounted catcher, place frame side hooks into slots in handle brackets.
- For DOOR PIVOT PIN mounted catcher, place the grass catcher frame hooks onto the door pivot pins.
- For DOOR SLOT mounted catcher, place the grass catcher frame hooks into the slots of the rear door.

NOTE: The grass catcher is secured to the lawn mower housing when the rear door is lowered onto the grass catcher frame.

HINGE BRACKET MOUNTED

HANDLE BRACKET MOUNTED

ASSEMBLE TOP TO FRAME AND BAG

NOTE: For ease of assembly, place catcher top upside down on work surface.

- Nest bag and frame assembly into catcher top.
- Install two (2) sharp pointed screws into **rear holes first** and tighten securely.
- Pull catcher bag forward on frame to remove slack.
- Install two (2) remaining sharp pointed screws in side holes and tighten securely.
- Align lower frame and catcher top front holes.
- Install two (2) blunt pointed screws in front holes and tighten securely.

“HARD TOP” GRASS CATCHER

ASSEMBLE FRAME AND BAG

- Thread upper tubular frame into hem of bag as shown. Be sure angled ends of frame point downwards.
- Slip lower frame into tubular upper frame as shown.
- Slip vinyl bindings over frame.

TO ATTACH HARD TOP CATCHER

- Open the rear door on mower housing.
- Place frame side hooks into slots in handle brackets.
- Release rear door, allowing it to nest into top of catcher.

⚠CAUTION: Under normal usage, the catcher material is subject to deterioration and wear and should, therefore, be checked frequently for replacement. Any replacement catcher should be checked to ensure compliance with original manufacturer's specifications.

⚠CAUTION: Do not run lawn mower without the discharge guard (rear door), approved grass catcher, clipping deflector or mulcher plate in place. Never attempt to operate mower with the discharge guard (rear door) removed or propped open.

SPARK PLUG BOOT

On some models a spark plug boot is packed loose in the parts bag. If your model has the boot, install on spark plug wire and reconnect spark plug wire to spark plug.

FOR ELECTRIC START MODELS ONLY - TO PREPARE BATTERY

NOTE: Your battery must be charged before you can start your lawn mower.

- Disconnect engine connector (male) from battery connector (female).
- Connect battery charger connector (male) to battery connector (female).
- Plug battery charger into 110 volt A.C. outlet.
- Leave battery charger connected for 24 hours before starting your engine for the first time.

After charging, connect engine connector (male) to battery connector (female). Your engine has an integral alternator for partial charging. Connect your battery charger to charge battery as required.

IMPORTANT: The engine alternator will not charge a discharged battery.

At the end of the mowing season the battery should be charged for 48 hours to protect the battery during winter storage.

⚠CAUTION: Always disconnect the engine connector (male) from the battery connector (female) to prevent accidental starting when transporting or storing your lawn mower after the season.

DECK-MOUNTED BATTERY

TRIMPLATE-MOUNTED BATTERY

OPERATION

The operation of any lawn mower can result in foreign objects thrown into the eyes, which can result in severe eye damage. Always wear safety glasses or eye shields while operating your lawn mower or performing any adjustments or repairs. We recommend a wide vision safety mask over spectacles or standard safety glasses.

HOW TO USE YOUR LAWN MOWER

ENGINE SPEED CONTROL

MODELS WITH FIXED SPEED ENGINES
Engine speed was set at the factory for optimum performance. Engine speed is not adjustable.

MODELS WITH REMOTE THROTTLE
Engine speed is controlled by the throttle control located on the upper handle.

- Move lever forward for fast engine speed, starting, and for better grass bagging.
- Move lever backward for slow engine speed.
- Some models have engines equipped with a choke feature. Move the lever all the way forward to the choke position when starting a cold engine.

MODELS WITH ENGINE MOUNTED SPEED CONTROL

The engine speed is controlled by a lever located at the carburetor on the engine. High or fast position is for starting engine, normal cutting and better grass bagging. Low or slow position is for light cutting, trimming and fuel economy.

BRIGGS & STRATTON CLASSIC AND SPRINT

BRIGGS & STRATTON QUANTUM

TECUMSEH

TO ADJUST CUTTING HEIGHT

Adjust cutting height to suit your requirements. Medium position is best for most lawns. Raise wheels for low cut and lower wheels for high cut.

MODELS WITH "SINGLE POINT" WHEEL HEIGHT ADJUSTERS

- All four wheels are adjusted by a single lever.
- Pull adjuster lever toward wheel. To raise mower, move lever forward to desired position. To lower mower, move the lever toward the rear.

LOWER
WHEELS
FOR HIGH
CUT

Single point
height adjuster
lever

RAISE
WHEELS
FOR LOW
CUT

MODELS WITH "QUICK ADJUST" WHEEL HEIGHT ADJUSTERS

NOTE: For shipping purposes, the rear wheels on your lawn mower may not be adjusted to the same position as the front wheels. Before operating mower adjust all wheels to the same cutting height.

- Raise wheels for low cut and lower wheels for high cut.
- Adjust cutting height to suit your requirements. Medium position is best for most lawns.
- To change cutting height, squeeze adjuster lever toward wheel. Move wheel up or down to suit your requirements. Be sure all wheels are in the same setting.

NOTE: Adjuster is properly positioned when plate tab inserts into hole in lever. Also, 9-position adjusters (if so equipped) allow lever to be positioned between the plate tabs.

LOWER WHEELS FOR HIGH CUT

RAISE WHEELS FOR LOW CUT

FOR MULCHING MOWERS ONLY

Most mulching mowers are shipped ready to be used as a mulcher.

“REAR DISCHARGE ONLY” MOWERS

Some models have a separate mulcher plug, other models have the mulcher plug built into the rear door. To convert to bagging or discharging, the plate or plug (if so equipped) must be removed from the discharge opening of the lawn mower.

- Open rear door and remove mulcher plate or plug (if so equipped). Store mulcher plate or plug in a safe place.
- You can now install grass catcher or optional clipping deflector accessory.
- To return to mulching operation, install mulcher plate or plug into discharge opening of mower.

⚠CAUTION: Do not run your lawn mower without mulcher plate/plug in place or approved clipping deflector or grass catcher in place. Never attempt to operate the lawn mower with the rear door removed or propped open.

MULCHER PLUG BUILT INTO REAR DOOR

MULCHER PLATE TYPE

“SIDE DISCHARGE ONLY” MOWERS

MULCHER PLATE TYPE

To convert to bagging or discharging, mulcher plate must be removed from underside of lawn mower.

- Remove the four (4) screws and lock nuts securing the mulcher plate to the mower.
- Store mulcher plate and hardware in a safe place.
- Mower can now be used for side discharging or optional grass catcher accessory can be attached.
- To return to mulching operation, simply reinstall mulcher plate and tighten hardware securely.

MULCHER PLUG TYPE

MULCHER PLUG TYPE "A"

To convert to mulching operation, mulcher plug must be installed into discharge opening of mower.

- Raise discharge guard and work mulcher plug into discharge opening of mower.
- Position lock lever over hinge bracket as shown and raise lever to lock mulcher plug in place.
- Allow discharge guard to rest against lock lever.
- To return to discharging or bagging operation, simply lower lock lever and remove mulcher plug from mower.

⚠CAUTION: Do not run your lawn mower without discharge guard, approved grass catcher or mulcher plate or plug in place.

MULCHER PLUG TYPE "B"

To convert to mulching operation, mulcher plug must be installed into discharge opening of mower.

- Open discharge guard.
- Insert tab of mulch plug into housing opening.
- Align hooks of mulch plug over hinge rod of discharge guard. Push mulch plug down until mulch plug is seated in housing opening.

⚠CAUTION: Do not run your lawn mower without discharge guard, approved grass catcher or mulcher plug in place.

“COMBI-CUT” MOWERS

Your lawn mower was shipped ready to be used as a mulcher. To convert to bagging or discharging:

REAR BAGGING

- Open rear door and remove mulcher plate. Store mulcher plate in a safe place.
- You can now install grass catcher.
- To convert to mulching or discharging operation, install mulcher plug into rear discharge opening of mower, making sure all tabs are seated properly.

SIDE DISCHARGING

- Mulcher plate must be installed into rear discharge opening of mower (see above instructions).
- Open mulcher door and install discharge deflector under door as shown.
- Mower is now ready for discharging operation.
- To convert to mulching or bagging operation, discharge deflector must be removed and mulcher door must be closed.

“MULTI-CUT” MOWERS

Your lawn mower was shipped ready to be used as a mulcher. Some models have a separate mulcher plug, other models have the mulcher plug built into the rear door. To convert to bagging or discharging:

REAR BAGGING

- If equipped with a separate mulcher plug, lift rear door and remove mulcher plug. Store mulcher plug in a safe place.
- Lift rear door and install grass catcher.
- To convert to mulching or discharging operation, remove grass catcher, install mulcher plug (if equipped), and close rear door.

SIDE DISCHARGING

- Mulcher plug must be installed into rear discharge opening of mower.
- Open mulcher door and install discharge deflector under door as shown.
- Mower is now ready for discharging operation.
- To convert to mulching or bagging operation, discharge deflector must be removed and mulcher door must be closed.

SIMPLE STEPS TO REMEMBER WHEN CONVERTING YOUR “COMBI-CUT” OR “MULTI-CUT” LAWN MOWER

FOR MULCHING -

- Rear mulcher plate or plug installed (if equipped) and rear door closed.
- Mulcher door closed.

FOR REAR BAGGING -

- Rear mulcher plate or plug removed (if equipped).
- Grass catcher installed.
- Mulcher door closed.

FOR SIDE DISCHARGING -

- Rear mulcher plate or plug installed (if equipped) and rear door closed.
- Side discharge deflector installed.

⚠CAUTION: Do not run your lawn mower without rear mulcher plate or plug in place or approved grass catcher in place. Never attempt to operate the lawn mower with the rear door removed or propped open.

GRASS CATCHER (REAR BAGGING MODELS ONLY)

TO EMPTY GRASS CATCHER

- Simply open rear door and lift grass catcher up and away from mower.

NOTE: Do not drag the bag when emptying. It will cause unnecessary wear.

⚠CAUTION: Under normal usage, the catcher material is subject to deterioration and wear and should, therefore, be checked frequently for replacement. Any replacement catcher should be checked to ensure compliance with original manufacturer's specifications.

⚠CAUTION: Do not run lawn mower without the rear door, approved grass catcher or clipping deflector in place. Never attempt to operate mower with the rear door removed or propped open.

OPERATOR PRESENCE CONTROL BAR

Your lawn mower is equipped with an operator presence control bar which requires the operator to be positioned behind the lawn mower handle in order to start and operate the lawn mower.

⚠CAUTION: Federal regulations require an engine control to be installed on this lawn mower in order to minimize the risk of blade contact injury. Do not under any circumstances attempt to defeat the function of the operator control. The blade turns when the engine is running.

DRIVE CONTROL

FRONT WHEEL DRIVE

- Self-propelling is controlled by holding the operator presence control bar down to the handle and pushing the drive control lever forward until it clicks; then releasing the lever.
- Forward motion will stop when the operator presence control bar is released. To stop forward motion without stopping engine, release the operator presence control bar slightly until the drive control disengages. Hold operator presence control bar down against handle to continue mowing without self-propelling.
- To keep drive control engaged when turning corners, push down on handle and lift front wheels off ground while turning lawn mower.

REAR WHEEL DRIVE (SINGLE SPEED)

- To start forward motion, lift drive control bar up to handle.
- To stop forward motion, release drive control bar.

REAR WHEEL DRIVE (MULTI-SPEED)

Your lawn mower provides multiple speeds to let you select the speed that suits you best.

- Lower speeds are for slow, heavy/thick grass cutting or trimming.
- Medium speeds are for normal grass cutting or trimming.
- High is for light cutting and for ground transport.

NOTE: Do not move speed control lever unless the engine is running.

TO OPERATE DRIVE SYSTEM

- With engine running, select ground speed by moving speed control lever to desired position.
- To start forward motion, pull drive control bar back against handle.
- To stop forward motion, release drive control bar.

IMPORTANT: Always keep drive control bar fully engaged against handle when in use.

“AUTOWALK” DRIVE CONTROL

- Self-propelling is controlled by holding the operator presence control bar down to the handle and pulling the drive control lever rearward to the handle. The farther toward the handle the lever is pulled, the faster the unit will travel.
- Forward motion will stop when either the operator presence control bar or drive control lever are released. To stop forward motion without stopping engine, release the drive control lever only. Hold operator presence control bar down against handle to continue mowing without self-propelling.

NOTE: If after releasing the drive control the mower will not roll backwards, push the mower forward slightly to disengage drive wheels.

FRONT WHEEL DRIVE MODELS

ONLY: To keep drive control engaged when turning corners, push down on the handle to lift the front wheels off the ground while turning lawn mower.

“AUTOWALK” ADJUSTMENT

Over time, the drive control system may become “loose”, resulting in decreased speed. There is a button on the underside of the drive control housing to increase tension on the drive cable. Proceed as follows:

- Turn unit off and disconnect spark plug wire from spark plug.
- Pull drive control lever all the way back to the handle.
- Push button on underside of drive control. While holding button in, return drive control lever to disengaged position.
- Release button.
- Operate mower to test drive speed. If condition becomes worse after the above steps (forward speed has become slower), your system was not “loose”. Repeating the above steps will return your unit to the proper adjustment and speed.
- If condition fails to improve after the above steps (forward speed remains the same), your drive belt is worn and should be replaced.

BEFORE STARTING ENGINE

Read the engine manual packed with your mower.

FILL ENGINE WITH OIL

Your lawn mower is shipped without oil in the engine.

- Be sure mower is level and area around oil fill is clean.
- Remove engine oil filler plug (oil fill cap/dipstick on models so equipped).
- Slowly add oil. For type and grade of oil to use, see “ENGINE” in the Maintenance section of this manual.
- Fill to the top of slot in filler hole (to “FULL” line on dipstick on models so equipped). Do not overfill.
- Replace plug (oil fill cap/dipstick on models so equipped) and tighten.
- Check oil level before each use. Add oil as needed.
- To change oil, see Maintenance section of this manual.

FILL GASOLINE TANK

- Fill gasoline tank with fresh, clean, unleaded gasoline. **DO NOT USE PREMIUM GASOLINE.** BE CAREFUL NOT TO OVERFILL TANK.

WARNING: Experience indicates that alcohol blended fuels (called gasohol or using ethanol or methanol) can attract moisture which leads to separation and formation of acids during storage. Acidic gas can damage the fuel system of an engine while in storage. To avoid engine problems, the fuel system should be emptied before storage of 30 days or longer. Drain the fuel tank, start the engine and let it run until fuel lines and carburetor are empty. Use fresh fuel next season. See Storage Instructions for additional information. Never use engine or carburetor cleaner products in fuel tank or permanent damage may occur.

TO START ENGINE

CAUTION: The mower blade rotates whenever the engine is running.

- Move engine speed control to fast position (or to choke/start position on models equipped with choke feature).
- If your mower has a primer, to start a cold engine, push primer as many times as instructed in the engine manual packed with your mower. Use a firm push. This step is not usually necessary when starting an engine which has already run for a few minutes.
- Hold operator presence control bar down against handle.

MODELS WITH RECOIL STARTER

- Pull starter handle quickly. Do not allow starter rope to snap back.

MODELS WITH ELECTRIC STARTER

- Push the engine start button (or turn the key on models so equipped).

IMPORTANT: Do not crank engine more than five continuous seconds between each time you try to start. Wait 5 to 10 seconds between each attempt.

ALL MODELS

- For engines equipped with choke, slowly move engine speed control lever to fast after engine starts.

TO STOP ENGINE

- To STOP engine, release operator presence control bar.

NOTE: For engines with a primer, it may be necessary to repeat priming steps in cooler weather. In warmer weather,

overpriming may cause flooding and engine will not start. If you do flood engine, wait a few minutes before attempting to start and **DO NOT** repeat priming steps.

MOWING TIPS

- For most cutting conditions and better bagging performance, the engine speed should be set in the fast position.
- Under certain conditions, such as when mowing very tall grass, raise the mower height on the first cut to reduce pushing effort, to avoid overheating the engine, and to avoid leaving clumps of grass clippings. Make the second cut to the desired height.
- For extremely heavy cutting, reduce the width of cut.
- For side discharge lawn mowers, cut in a counterclockwise direction, starting at the outside of the area to be cut, in order to spread grass clippings more evenly and to put less load on the engine. To keep clippings off of walkways, flower beds, etc., make the first cuts in a clockwise direction.
- When using a rear discharge lawn mower in moist, heavy grass, clumps of cut grass may not enter the grass catcher. Reduce ground speed (pushing speed) and/or run the lawn mower over the area a second time.
- If a trail of grass clipping is left on the right side of a rear discharge lawn mower, mow in a clockwise direction with a small overlap to collect the clippings on the next pass.
- Pores in cloth grass catchers can become filled with dirt and dust with use and the catcher will collect less grass. To prevent this, regularly hose catcher off with water and let dry before use.

FOR MULCHING MOWERS ONLY - MULCHING MOWING TIPS

IMPORTANT: For best performance, keep mower housing free of built-up grass and trash. See "CLEANING" in the Maintenance section of this manual.

- The special mulching blade will recut the grass clippings many times and reduce them in size so that as they fall onto the lawn they will disperse into the grass and not be noticed. Also, the mulched grass will biodegrade quickly to provide nutrients for the lawn. Always mulch with your highest engine (blade) speed as this will provide the best recutting action of the blades.
- Avoid cutting your lawn when it is wet. Wet grass tends to form clumps and interferes with the mulching action. The best time to mow your lawn is the early afternoon. At this time the grass has dried and the newly cut area will not be exposed to the direct sun.
- For best results, adjust the lawn mower cutting height so that the lawn mower cuts off only the top one-third of the grass blades. If the lawn is overgrown it will be necessary to raise the height of cut to reduce pushing effort and to keep from overloading the engine and leaving clumps of mulched grass. For extremely heavy mulching, reduce your width of cut by overlapping previously cut path and mow slowly.
- Certain types of grass and grass conditions may require that an area be mulched a second time to completely hide the clippings. When doing a second cut, mow across or perpendicular to the first cut path.
- Change your cutting pattern from week to week. Mow north to south one week then change to east to west the next week. This will help prevent matting and graining of the lawn.

MAINTENANCE

MAINTENANCE SCHEDULE		SERVICE DATES									
FILL IN DATES AS YOU COMPLETE REGULAR SERVICE		<div>BEFORE EACH USE</div> <div>AFTER EACH USE</div> <div>EVERY 10 HOURS</div> <div>EVERY 25 HOURS OR EVERY SEASON</div> <div>BEFORE STORAGE</div>									
MOWER	Check for Loose Fasteners	✓						✓			
	Clean/Inspect Grass Catcher (If Equipped)	✓	✓					✓			
	Clean Lawn Mower		✓					✓			
	Clean Under Drive Cover (Power-Propelled Mowers)			✓							
	Check drive belt/pulleys (Power-Propelled Mowers)					✓					
	Check/Sharpen/Replace Blade					✓ ³					
	Lubrication Chart					✓		✓			
	Clean Battery/Recharge (Electric Start Mowers)					✓		✓ ⁴			
ENGINE	Check Engine Oil Level	✓									
	Change Engine Oil					✓ ^{1,2}					
	Clean Air Filter					✓ ²					
	Inspect Muffler					✓					
	Clean or Replace Spark Plug					✓					
	Replace Air Filter Paper Cartridge					✓ ²					

1 - Change more often when operating under a heavy load or in high ambient temperatures.

2 - Service more often when operating in dirty or dusty conditions.

3 - Replace blades more often when mowing in sandy soil.

4 - Charge 48 hours at end of season.

GENERAL RECOMMENDATIONS

The warranty on this lawn mower does not cover items that have been subjected to operator abuse or negligence. To receive full value from the warranty, operator must maintain mower as instructed in this manual.

Some adjustments will need to be made periodically to properly maintain your unit. All adjustments in the Service and Adjustments section of this manual should be checked at least once each season.

- Once a year, replace the spark plug, clean or replace air filter element and check blade for wear. A new spark plug and clean/new air filter element assure proper air-fuel mixture and help your engine run better and last longer.
- Follow the maintenance schedule in this manual.

BEFORE EACH USE

- Check engine oil level.
- Check for loose fasteners.

LUBRICATION

Keep unit well lubricated (See "LUBRICATION CHART").

LUBRICATION CHART

① Spray lubricant

② See "ENGINE" in Maintenance section.

IMPORTANT: Do not oil or grease plastic wheel bearings. Viscous lubricants will attract dust and dirt that will shorten the life of the self-lubricating bearings. If you feel they must be lubricated, use only a dry, powdered graphite type lubricant sparingly.

LAWN MOWER

Always observe safety rules when performing any maintenance.

TIRES

- Keep tires free of gasoline, oil, or insect control chemicals which can harm rubber.
- Avoid stumps, stones, deep ruts, sharp objects and other hazards that may cause tire damage.

BLADE CARE

For best results, mower blade must be kept sharp. Replace bent or damaged blades.

TO REPLACE BLADE

- Turn lawn mower. See engine manual for proper direction of turning over the engine.
- Use a wood block between blade and mower housing to prevent blade from turning when removing blade bolt.
- Protect your hands with gloves and/or wrap blade with heavy cloth.
- Remove blade bolt, lock washer and flat washer.
- Remove blade and blade adapter.
- Inspect the key inside blade adapter. Replace adapter if damaged.

IMPORTANT: Blade bolt is grade 8 heat treated.

- Install new or sharpened blade with trailing edge up toward the engine.
- Position blade on blade adapter. Align the two (2) holes in blade with raised lugs of adapter.
- Reassemble blade bolt, lock washer and flat washer into blade adapter and crankshaft in exact order as shown.
- Position block of wood between blade and mower housing.
- Tighten blade bolt securely. Recommended tightening torque is 35-40 ft. lbs.

NOTE: We do not recommend sharpening blade - but if you do, be sure the blade is balanced.

TO SHARPEN BLADE

Care should be taken to keep the blade balanced. An unbalanced blade will cause excessive vibration and eventual damage to lawn mower and engine.

- The blade can be sharpened with a file or on a grinding wheel. Do not attempt to sharpen while on the mower.
- To check blade balance, drive a nail into a beam or wall. Leave about one inch of the straight nail exposed. Place center hole of blade over the head of the nail. If blade is balanced, it should remain in a horizontal position. If either end of the blade moves downward, sharpen the heavy end until the blade is balanced.

DRIVE COVER

Clean under the drive cover at least twice a season. Scrape underside of cover with a putty knife or similar tool to remove any buildup of trash or grass.

GEAR CASE (GEAR DRIVE MODELS)

- To keep your drive system working properly, the gear case and area around the drive should be kept clean and free of trash build-up. Clean under the drive cover twice a season.
- The gear case is filled with lubricant to the proper level at the factory. The only time the lubricant needs attention is if service has been performed on the gear case.

GEAR CASE WITH METAL HOUSING:

- If lubricant is required, use only Texaco Starplex Premium 1 Grease, Part No. 750369. Do not substitute.

GEAR CASE WITH PLASTIC HOUSING:

- If lubricant is required, use only Elf brand oil, Part No. REDUCTELF 100. Do not substitute.

DRIVE WHEELS

Check front drive wheels each time before you mow to be sure they move freely. The wheels not turning freely means trash, grass cuttings, etc. are in the drive wheel area and must be cleaned to free drive wheels.

If necessary to clean the drive wheels, check both front wheels.

- Remove hubcaps (if equipped), hairpin cotters and washers (or flange locknut if equipped with threaded axle) from both drive wheels.
- Remove wheels from wheel adjusters.
- Remove any trash or grass cuttings from inside the dust cover, pinion and/or drive wheel gear teeth.
- Put wheels back in place.
- If after cleaning, the drive wheels do not turn freely, contact your nearest authorized service center.

ENGINE

Read the maintenance section of your engine manual.

LUBRICATION

Change the oil after the first two hours of operation and every 25 hours thereafter or at least once a year if the lawn mower is not used for 25 hours in one year. Refer to engine manual.

TO CHANGE ENGINE OIL (SEE ENGINE MANUAL)

- Be sure lawn mower is on level surface.
- Oil will drain more freely when warm.
- Catch oil in a suitable container.
- For engines without dipstick, remove bottom oil drain plug.

- For engines with oil fill cap/dipstick, remove bottom drain plug or remove engine oil cap and turn mower on its side.
- After oil has drained completely, replace oil drain plug and tighten securely.
- Refill engine with oil. Pour slowly. Do not overfill.
- Fill to top of slot inside of filler hole or to "FULL" line on dipstick on models so equipped. Keep oil at proper level.

AIR FILTER

Your engine will not run properly and may be damaged by using a dirty air filter. Clean the element after every 25 hours of operation or every season. Replace the air filter every 100 hours of operation or every season, whichever occurs first. Service air cleaner more often under dusty conditions. See the maintenance section of your engine manual.

MUFFLER

Inspect and replace corroded muffler as it could create a fire hazard and/or damage.

SPARK PLUG

Replace spark plugs at the beginning of each mowing season or after every 100 hours of operation, whichever occurs first. Set spark plug gap according to engine manual specifications.

CLEANING

IMPORTANT: For best performance, keep mower housing free of grass build-up and trash. Clean the underside of your mower after each use.

- Clean the underside of your lawn mower by scraping to remove buildup of grass and trash.
- Clean engine often to keep trash from accumulating. A clogged engine runs hotter and shortens engine life.
- Keep finished surfaces and wheels free of all gasoline, oil, etc.

We do not recommend using a garden hose to clean your lawn mower unless the electrical system, muffler, air filter, and carburetor are covered to keep water out. Water in engine can shorten engine life.

GRASS CATCHER (IF SO EQUIPPED)

Grass catcher may be hosed with water but must be dry when used.

⚠CAUTION: Under normal usage, the catcher material is subject to deterioration and wear and should therefore be checked to ensure compliance with original manufacturer specifications.

SERVICE AND ADJUSTMENTS

⚠CAUTION: Before performing any service or adjustments:

- Release operator presence control bar.
- Make sure the blade and all moving parts have completely stopped.
- Disconnect spark plug wire from spark plug and place where it cannot come in contact with plug.

LAWN MOWER

TO ADJUST CUTTING HEIGHT

See "TO ADJUST CUTTING HEIGHT" in the Operation section of this manual.

TO ADJUST HANDLE

2 POSITION

The handle can be mounted in a high or low position. The mounting holes in the bottom of lower handle are off center for raising or lowering the handle.

- Remove upper handle and all parts attached to lower handle.
- Remove hairpin cotters from lower handle bracket mounting pin.
- Squeeze lower handle in to remove it from mounting pins.
- Turn lower handle over to raise or lower handle.
- Squeeze lower handle in and position holes onto mounting pins on handle bracket.
- Reassemble hairpin cotters onto mounting pins.
- Reassemble upper handle and all parts removed from lower handle.

3 POSITION "EURO" OR "EZ"

The handle on your lawn mower has three (3) height positions - adjust to height that suits you.

- Remove knob and carriage bolt on one side of the lower handle.
- While holding handle assembly, remove knob and carriage bolt from opposite side, align hole in handle with desired hole in handle bracket and reassemble bolt and knob and tighten securely.
- Align opposite side of handle with same positioning hole and secure with bolt and knob.

"EURO" ADJUSTMENT

"EZ" ADJUSTMENT

3 POSITION "QUICK"

The handle on your lawn mower has three (3) height positions - adjust to height that suits you.

- Squeeze the bottom ends of lower handle towards each other until the pin in handle can be inserted into one of the three height adjustment holes.

"ADJUSTABLE" HANDLES

The upper handle may be adjusted to four (4) different height positions.

- Loosen both handle knobs only enough to allow the upper handle to pivot to the desired adjustment position.
- Tighten both handle knobs securely.

REAR DEFLECTOR (IF EQUIPPED)

The rear deflector, attached between the rear wheels of your mower, is provided to minimize the possibility that objects will be thrown out of the rear of the mower into the operator mowing position. If the deflector becomes damaged, it should be replaced.

TO REMOVE / REPLACE DRIVE BELT FRONT WHEEL GEAR DRIVE

- Remove drive cover. Remove belt from gearcase pulley by pushing down on pulley and rolling belt off it.
- Turn lawn mower on its side with air filter and carburetor up.
- Remove blade.
- Remove debris shield.
- Remove belt from engine pulley on crankshaft.
- Install new belt by reversing above steps.
- Always use factory approved belt to assure fit and long life.

GEAR CASE WITH METAL HOUSING:

GEAR CASE WITH PLASTIC HOUSING:

FRONT WHEEL BELT DRIVE

- Remove drive cover by removing screw at rear of cover.
- Remove belt from drive pulley.
- Remove hubcaps and nuts from both drive wheels. Remove wheels and washers from wheel adjusters.
- At left drive wheel only, remove E-ring, pinion, roll pin, felt washer and dust cover.
- Remove retainer clip from drive shaft on left side of driven pulley.
- While holding pulley slide drive shaft to the right until belt can be removed from opening in housing.
- Pull belt free from idler pulley and take out of clutch frame.
- Reverse procedure to install new belt.

NOTE: When re-assembling pinion, be sure that the felt washer is in place behind the roll pin and that the roll pin is seated in the slots on the bearing and in the back of the pinion.

- When reinstalling the belt cover be sure the front hook is under clutch frame. Reinstall in rear of cover.

DRIVE BELT ADJUSTMENT (FRONT BELT DRIVE MODELS ONLY)

A misadjusted belt will wear faster. Be sure to keep belt properly adjusted.

- After prolonged use and drive belt wear, if the clutch lever has reached the top of the slot in the clutch frame and the belt is still loose, move adjustable idler pulley to upper hole in clutch frame.

NOTE: When installing a new belt, adjustable idler pulley must be returned to lower hole (original position) in clutch frame.

ENGINE

CARBURETOR

The carburetor has been preset at the factory and adjustment should not be necessary. However, minor adjustment may be required to compensate for differences in fuel, temperature, altitude or load.

- The air filter must be assembled to the carburetor when running engine.
- Best carburetor adjustment is obtained when fuel tank is 1/4 full.
- In order for the engine to run, the operator presence control bar must be held in the operating position. Therefore, an assistant will be required to hold the control bar in the operating position when making final adjustment to the carburetor.

See the adjustment section of your engine manual for further instructions.

ENGINE SPEED

The engine speed has been factory set. Do not attempt to increase engine speed as it may result in personal injury. If you believe the engine is running too fast or too slow, take your lawn mower to an authorized engine service center for repair and adjustment.

THROTTLE CONTROL

If it becomes necessary to adjust or replace the throttle control, see the adjustment section of your engine manual.

STORAGE

Immediately prepare your lawn mower for storage at the end of the season or if the unit will not be used for 30 days or more.

CAUTION: Never store the lawn mower with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.

LAWN MOWER

When lawn mower is to be stored for a period of time, clean it thoroughly, remove all dirt, grease, leaves, etc. Store in a clean, dry area.

- Clean entire lawn mower (See “CLEANING” in the Maintenance section of this manual).
- Lubricate as shown in the Maintenance section of this manual.
- Be sure that all nuts, bolts, screws, and pins are securely fastened. Inspect moving parts for damage, breakage and wear. Replace if necessary.
- Touch up all rusted or chipped paint surfaces; sand lightly before painting.

HANDLE

Your handle may be folded for storage as shown.

- Squeeze the bottom ends of lower handle towards each other until handle clears the handle brackets and swing handles forward over mower.
- Loosen upper handle mounting hardware enough to allow upper handle to be folded back.

IMPORTANT: When folding handles for storage or transportation, be sure to fold handles as shown or you may damage the control cables.

2 POSITION / “ADJUSTABLE” HANDLES

When setting you handles up from the storage position, the lower handle will automatically lock into mowing position.

3 POSITION HANDLES

When setting up your handle from the storage position, the lower handle will require manually locking into the mowing position.

3 POSITION “EURO”

3 POSITION “EZ”

3 POSITION “QUICK”

ENGINE

FUEL SYSTEM

IMPORTANT: It is important to prevent gum deposits from forming in essential fuel system parts such as carburetor, fuel filter, fuel hose, or tank during storage. Also, experience indicates that alcohol blended fuels (called gasohol or using ethanol or methanol) can attract moisture which leads to separation and formation of acids during storage. Acidic gas can damage the fuel system of an engine while in storage.

- Drain the fuel tank.
- Start the engine and let it run until the fuel lines and carburetor are empty.
- Never use engine or carburetor cleaner products in the fuel tank or permanent damage may occur.
- Use fresh fuel next season.

NOTE: Fuel stabilizer is an acceptable alternative in minimizing the formation of fuel gum deposits during storage. Add stabilizer to gasoline in fuel tank or storage container. Always follow the mix ratio found on stabilizer container. Run engine at least 10 minutes after adding stabilizer to allow the stabilizer to reach the carburetor. Do not drain the gas tank and carburetor if using fuel stabilizer.

ENGINE OIL

Drain oil (with engine warm) and replace with clean oil. (See "ENGINE" in the Maintenance section of this manual).

CYLINDER

- Remove spark plug.
- Pour one ounce (29 ml) of oil through spark plug hole into cylinder.
- Pull starter handle slowly to distribute oil.
- Replace with new spark plug.

BATTERY (IF EQUIPPED)

Disconnect the battery from the engine connector and charge battery 48 hours.

OTHER

- Do not store gasoline from one season to another.
- Replace your gasoline can if your can starts to rust. Rust and/or dirt in your gasoline will cause problems.
- If possible, store your unit indoors and cover it to give protection from dust and dirt.
- Cover your unit with a suitable protective cover that does not retain moisture. Do not use plastic. Plastic cannot breathe, which allows condensation to form and will cause your unit to rust.

IMPORTANT: Never cover mower while engine and exhaust areas are still warm.

CAUTION: Never store the lawn mower with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.

TROUBLESHOOTING - See appropriate section in manual unless directed to a qualified Service Center.

PROBLEM	CAUSE	CORRECTION
Does not start	<ol style="list-style-type: none"> 1. Dirty air filter. 2. Out of fuel. 3. Stale fuel. 4. Water in fuel. 5. Spark plug wire is disconnected. 6. Bad spark plug. 7. Loose blade or broken blade adapter. 8. Control bar in released position. 9. Control bar defective. 10. Fuel valve lever (if so equipped) in OFF position. 11. Weak battery (if equipped). 12. Disconnected battery connector (if equipped). 	<ol style="list-style-type: none"> 1. Clean/replace air filter. 2. Fill fuel tank. 3. Drain tank and refill with fresh, clean fuel. 4. Drain fuel tank and carburetor and refill tank with fresh gasoline. 5. Connect wire to plug. 6. Replace spark plug. 7. Tighten blade bolt or replace blade adapter. 8. Depress control bar to handle. 9. Replace control bar. 10. Turn fuel valve lever to the ON position. 11. Charge battery. 12. Connect battery to engine.
Loss of power	<ol style="list-style-type: none"> 1. Rear of lawn mower housing or cutting blade dragging in heavy grass. 2. Cutting too much grass. 3. Dirty air filter. 4. Buildup of grass, leaves, and trash under mower. 5. Too much oil in engine. 6. Walking speed too fast. 	<ol style="list-style-type: none"> 1. Set to "Higher Cut" position. 2. Set to "Higher Cut" position. 3. Clean/replace air filter. 4. Clean underside of mower housing. 5. Check oil level. 6. Cut at slower walking speed.

TROUBLESHOOTING - See appropriate section in manual unless directed to a qualified Service Center.

PROBLEM	CAUSE	CORRECTION
Poor cut – uneven	<ol style="list-style-type: none"> 1. Worn, bent or loose blade. 2. Wheel heights uneven. 3. Buildup of grass, leaves and trash under mower. 	<ol style="list-style-type: none"> 1. Replace blade. Tighten blade bolt. 2. Set all wheels at same height. 3. Clean underside of mower housing.
Excessive vibration	<ol style="list-style-type: none"> 1. Worn, bent or loose blade. 2. Bent engine crankshaft. 	<ol style="list-style-type: none"> 1. Replace blade. Tighten blade bolt. 2. Contact a qualified service center.
Starter rope hard to pull	<ol style="list-style-type: none"> 1. Engine flywheel brake is on when control bar is released. 2. Bent engine crankshaft. 3. Blade adapter broken. 4. Blade dragging in grass. 	<ol style="list-style-type: none"> 1. Depress control bar to upper handle before pulling starter rope. 2. Contact a qualified service center. 3. Replace blade adapter. 4. Move lawn mower to cut grass or to hard surface.
Grass catcher not filling (If so equipped)	<ol style="list-style-type: none"> 1. Cutting height too low. 2. Lift on blade worn off. 3. Catcher not venting air. 	<ol style="list-style-type: none"> 1. Raise cutting height. 2. Replace blade. 3. Clean grass catcher.
Hard to push	<ol style="list-style-type: none"> 1. Grass is too high or wheel height is too low. 2. Rear of lawn mower housing or cutting blade dragging in grass. 3. Grass catcher too full. 4. Handle height position not right for you. 	<ol style="list-style-type: none"> 1. Raise cutting height. 2. Raise rear of lawn mower housing one (1) setting higher. 3. Empty grass catcher. 4. Adjust handle height to suit.
Loss of drive or slowing of drive speed	<ol style="list-style-type: none"> 1. Belt wear. 2. Belt off of pulley. 3. Drive cable worn or broken. 4. Dirt in drive pinions. 5. “Loose” drive control system. 	<ol style="list-style-type: none"> 1. Check/replace drive belt. 2. Check/reinstall drive belt. 3. Replace drive cable. 4. Clean drive pinions. 5. Adjust drive control.
